TRUSTEES' REPORT.

To His Excellency the Governor and the Honorable Council.

The trustees of the Worcester Insane Hospital, having in charge the Worcester Insane Asylum, respectfully submit their thirty-first annual report of the asylum, together with the reports of the superintendent and treasurer.

The asylum was directed to make provision during the year for an average of 1,000 patients, and the daily average number of patients for the year has been 997.46, as against 922.61 for the previous year. The appropriation for the past year has proved adequate to provide for the needs of the institution.

In compliance with law there has been a decrease in the hours of labor of the employees and weekly payment of wages has been instituted. There has also been some increase in the wages paid nurses and attendants.

The general health of the institution has been good and the death-rate rather below the average.

At the asylum no new work has been undertaken, but the changes, alterations and repairs in the kitchen and in the congregate dining room for men have been substantially completed. For the ensuing year no appropriation is asked for on behalf of the asylum beyond that necessary for its ordinary maintenance.

At the colony much is being accomplished. A new building for 60 excitable women is in process of erection. With the completion of this new building the present dining accommodations in the basement of the Birches will prove inadequate. This dining room at best is dark and unsatisfactory, and is filled to its capacity. We ask for an appropriation of \$35,000 for the erection and furnishing of a service building which will

provide a kitchen and dining room for the group of buildings occupied by women patients.

It is expected that the institution will be called upon to care for 1,075 patients during the coming year. This will require additional accommodations for the so-called colony type, and an appropriation of \$40,000 is asked for the erection and furnishing of one building for 50 women and one building for 50 men.

During the past year there has been a distinct improvement in the quality of the employees. This improvement is due in part to the business depression, but it seems probably due in part to the lessening of the hours of service of employees, the increase in wages and the general betterment of the conditions under which they labor. But more remains to be accomplished in this direction. The rapid increase in the number of employees has outrun the accommodations designed for them, and many employees are now occupying quarters intended for patients. It is desirable to furnish houses for as many employees as possible, where they can live when off duty under better and more normal conditions than at present. To this end we ask an appropriation of \$18,000 for the erection of three cottages, each one of which shall provide on the first floor a home for a man and his family, and on the second floor furnished rooms for at least seven nurses.

The institution has had the constant advice and co-operation of the State Board of Health in regard to its water supply. The present water supply, during the phenomenal drought of the past year, has been barely adequate to supply the present needs of the colony. In view of the assured development of the institution the present water supply will be insufficient, and the State Board of Health has advised the trustees to take immediate steps to secure an additional water supply. Expert examination indicates that there is no other great source of supply on the premises now owned by the institution. In order to obtain a proper source of supply by the acquisition of adjoining estates upon which it can be found, an appropriation of \$12,600 is asked for.

In accordance with the suggestions of the State Board of Health, and with the appropriation granted last year, the work of sewage disposal has been undertaken. The estimate of the expense of disposal was \$14,000, of which \$6,000 only was asked for and obtained last year. For the completion of the work undertaken an appropriation of \$7,000 is asked.

Road building and repairing machinery has been acquired, and during the past year a substantial beginning has been made in the care and maintenance of the road adjoining the land of the Commonwealth.

In some of the colony buildings there is unused space which could be finished off to provide for the accommodation of employees, and several of the old barns need repair, in order that they may afford better storage for hay and other necessary farm accommodations.

At two points along the line of the electric street railway running through the colony, waiting stations for employees and friends of patients would prove a great convenience. The management of the road does not seem inclined to construct these shelters. For the accomplishment of this miscellaneous work an appropriation of \$3,500 is asked.

During the year two changes have occurred on the official staff. Dr. Wheeler resigned his position to enter general practice and Dr. Hanson accepted a position with the State Board of Insanity. Drs. B. H. Mason and R. C. Kell have been elected to fill the vacancies.

The trustees gladly acknowledge their obligation to the superintendent, members of the staff and employees for their faithful and devoted service to the asylum during the past year.

Worcester, Nov. 30, 1908.

SUPERINTENDENT'S REPORT.

To the Trustees of the Worcester Insane Hospital, acting for the Worcester Insane Asylum.

The thirty-first annual report of the superintendent of the Worcester Insane Asylum is respectfully submitted.

At the beginning of the statistical year, Oct. 1, 1907, 975 persons were inmates of this institution, — 469 men and 506 women. During the year there were admitted 135 cases, — 57 men and 78 women, making the whole number of cases under treatment 1,110, — 526 men and 584 women. Of this number, there were discharged as capable of self-support 2 men and 1 woman, as improved 1 man and 2 women, as not improved 2 men, 7 men were transferred elsewhere, 2 men and 1 woman escaped, 4 men and 5 women are on visit, and 20 men and 28 women died, leaving, Sept. 30, 1908, 1,035 patients, — 488 men and 547 women. The daily average for the statistical year was 987.48, as against 911.30 for the previous year.

The persons admitted have not been in as good physical condition as usual, and there has been among them less of active excitement and more of dementia. The enfeebled mental condition of these persons gives little hope of improvement and still less of recovery. A continued influx of persons of this unpromising condition of mind, as it lessens the hope of mental improvement imposes a serious handicap upon our attempts to encourage useful work and effort. While active interest is kept up and encouraging results are obtained, even under existing conditions, it is evident that our richest returns will undoubtedly come at that time, which I am confident will come, when the great body of our patients is received more directly from the general public and less by transfer from other institutions. Meantime, the difficulty of securing useful workers among our patients renders necessary a larger percentage of paid em-

ployees, and appreciably adds to the sum total of our expenditures.

It is pleasant to be able to turn from the contemplation of this rather unsatisfactory aspect of our work and to present something more cheerful. Of the persons discharged during the year, 2 men and 1 woman were classified as "capable of self-support." The subsequent histories of these persons since discharge, in each case, indicate a recovery, and nothing but a desire to be conservative prevented them from being rated as recovered at the time of their leaving the institution. All of them have re-entered the life of the community and resumed their old places, and have so far been able to maintain themselves. From the character of the mass of our patients even one recovery would be a rich return for any effort.

Notwithstanding the feeble condition of those admitted, on the whole our patients have shown physical improvement. There has been no case of contagious disease, in either patients or employees, originating during the year. The death-rate continues low. As a cause of death, tuberculosis, after a temporary retirement in several reports; advances again to first place. This showing is rather misleading, however, as the great majority of those who died from this disease were afflicted with it on admission here. This preponderance in numbers is rather due to the accident of the selection of cases for transfer than from any probability that tuberculosis is on the increase among the insane. In fact, I am very confident that the contrary is true. It is interesting to note that dementia was the predominant mental condition in those who died from tuberculosis. Among those admitted primary dementia seems to have played a more important part than usual.

The sole purpose of the maintenance of this institution is, of course, the care and treatment of the insane. To properly carry out this purpose is quite a complex proposition. We wish to avail ourselves of the best means and instruments that we can command. One of the most important considerations is the selection and retaining of proper persons to assist in the care of our unfortunate charges. It has been very noticeable in the past that in the times of general business depression it has been much easier to secure and retain suitable persons in the em-

ployment of the institution. With the return of business prosperity in the community there has always come an exodus of too many of our better people, showing that something must be done to improve the conditions of the service if we are to retain in our employ the more desirable persons. With this end in view I would recommend that your Board ask for an appropriation of \$18,000 for the erection of three cottages for employees.

During the past few years there has been a rapid increase in the number of patients cared for at this asylum. As the parent institution in Worcester was long ago filled to the limit of its capacity, all of the later increase has been cared for at the Grafton colony. A large percentage of the cases cared for there has been of that noisy and turbulent class which has demanded a close supervision and substantial construction of buildings to withstand the wear and tear of use. That class has been pretty well taken care of, for a time, and we can now turn our energies more towards the development of the colony idea. To the milder and quieter cases, more amenable to control, a much greater range of liberty can be accorded. these people much simpler and less expensive accommodations will suffice. To properly care for these colony cases I respectfully recommend that your Board ask the Legislature for an appropriation of \$40,000 for the erection and furnishing of one building for 50 men and one building for 50 women. An excellent location for the building for men exists a short distance to the south of the present building at the Oaks. kitchen and dining room at this latter building are of sufficient capacity to care for the patients who would occupy the proposed building, an arrangement which would tend greatly to economy in the administration of this group. The present steam plant is also of sufficient capacity to furnish the necessary heat. In this part of our colony an excellent opportunity offers for the development of the special colony work for men. The land is rough and rocky, but when once subdued and under cultivation the soil is good, and gives good return for the effort expended upon it. A variety of building sites offer here, well located for future expansion.

Up to the present time the chief effort in the development of the colony idea has been among the men. This is perhaps natural, as the majority of the activities of out-of-door country life are those in which men ordinarily engage. I feel that it is unnecessary and even wrong to bar women from the probable benefits that would accrue from a more active, out-of-door existence. I believe that a large share of such work can be reckoned as distinctly within woman's sphere. The planting and the cultivation of flowers, much of the care of the grounds adjacent to the women's buildings and many of the light agricultural operations of the vegetable garden seem to me to offer avenues of proper and useful effort. In carrying out such a work as this it should always be borne in mind that the improvement of the individual is the prime end sought, and that the occupation is a purely subordinate means to an end. Work of this sort would be a remedial measure, prescribed in the treatment of disease. The success or failure of such an undertaking would depend in a large measure upon the interest and capacity of the individual immediately in charge of this work. At the No. 2 colony are several sites very suitable for the location of colony buildings for women.

At the group for excitable women, with the completion of the building now under construction, a considerable enlargement of our kitchen and dining facilities will be needed. When undertaking this work I believe that it will be the part of wisdom to make provision for something in excess of our present needs, as this location is a natural center, near which some future expansion will be likely to take place. Carefully prepared plans have been made which show that for the erection of this building, and the bringing to it of the necessary heating and water connections, \$35,000 will be required. For the carrying out of these plans I recommend that your Board ask for the above sum of money.

The consumption of water at the colony is at the present time about 100,000 gallons per day. Tests made in the early part of the year, under the direction of an experienced and competent sanitary engineer, developed a daily output, from our present source of supply, of nearly 300,000 gallons. It was estimated from this that a supply of 100,000 gallons could probably be depended upon in the season of shortest supply. Our experience has demonstrated that this amount probably could be depended upon in an average year, but at the present time we are finding it difficult to make the supply keep pace with our consumption. Careful estimates have been obtained, which show that for the purchase of additional land and the installation of necessary pipes and pumps the sum of \$12,600 will be needed. I recommend that this amount be asked from the Legislature.

The work of providing suitable disposition for the sewage of the colony is being steadily carried on. Such an appropriation was secured from the last Legislature as it was thought could be profitably used during the year. A most careful estimate shows that an appropriation of \$7,000 more will be needed to complete the work.

For the providing of additional rooms in certain buildings, for the repair of three old barns and for the providing of suitable waiting stations along the line of the electric road an appropriation of \$3,500 will be needed.

Another of our farm cottages, that was not adapted to the use of patients, has been repaired and painted and had sanitary plumbing installed. This now serves as a very comfortable home for one of our employees and his family.

In the line of colony development the work of redemption of wild lands is steadily progressing, and each year sees a little more land under the plough than the preceding one. A greatly increased amount of ensilage corn has been produced and stored in our silos, a fact which will very materially help to compensate for a rather light hay crop. The general result of our farming operations has been satisfactory.

A considerable advance has been made in the improvement of our herds. During the coming year the number of our mileh cows will be very materially increased from stock which has been raised from our own cows. A few registered cattle have been purchased, so that we might further improve the quality of our stock. The new cow barn at No. 3 has been completed and occupied since my last report. It is proving very convenient and satisfactory in operation.

I wish again to record my appreciation of the very intelligent assistance that has been given me by officers and employees in administering the affairs of the institution.

To the "Worcester Evening Gazette" we are indebted for a copy of their paper. The Worcester Employment Society has done for us a large amount of useful sewing. The Hospital Newspaper Society has, as usual, contributed books and miscellaneous reading matter.

E. V. SCRIBNER,
